Guardian IV 1000

Guardian IV 1000

“Safety, Durability and Simplicity “

→ The Guardian series is a safe, smooth and economical solution. It is designed to enhance its cost effectiveness within its minimal structure which makes it easier to be installed in a corner just about anywhere and in a short period of time. No shaft or machine room is required, the Guardian series comes with its integrated machine and controller. *It's just what you need, where you need it.*

→ A basic solution (figure to the left) which consists of a passenger platform, surrounded by 3 short sides, one of which has the operating panel and a landing door at each stop. An optional automatic folding ramp makes it easier for wheelchairs to get on the lift.

→ To ensure safety, the Guardian series provides motion sensors beneath the lift in order to stop the lift in case an obstruction is detected.

→ According to the customer's requirements and the space area provided, the Guardian series could be enclosed in a tower, disregarding the sides of the platform as shown in the figure below.

→ The Guardian series can be implemented indoors or outdoors, covering a wide range of needs and expectations; from bare simplicity (figure below) up to luxurious full cabin designs (figure above).

→ A full height side could be provided with different styles, with an integrated mirrors, spotlights, operating panel and handrail (see figure above).
